

Emergency First Aid

Develop the skills, knowledge and personal abilities you need to succeed.

We are obsessed with supporting and developing our workforce. Part of that support involves both staff feeling safe at work and improving and learning new skills. It is our belief that staff that acquire a new skill and feel confident using that skill become more engaged at work.

Why Choose Us?

Our trainer brings his passion for first aid from his first aid volunteering to any course he delivers. He uses the experience he has gained from treating at events and at work to deliver engaging and interactive sessions using genuine situations to make the training relatable to your workplace.

Our courses are tailored to your place of work and can be adjusted if you have additional requirements and specific needs.

59%

of pre-hospital deaths were potentially preventable with better first aid intervention.

50%

When there was an opportunity to treat a patient first aid was only used in half of the occasions.

“

The training was fun and informative and has given me confidence should I need to act in an emergency situation.

”

How it works?

We offer fully regulated first aid courses through Nuco Training who are approved by First Aid Awards. Using our new training classroom we can deliver courses in East Reach in Taunton but we can also come to you to deliver these courses. Using latest resuscitation council guidelines, NHS, NICE and HSE guidelines we will continue to adjust our courses to fit changes to first aid practice. Working in insurance we know how important it is for business to comply with every part of legislation, so we ensure that our courses are exactly what you need but delivered in an enjoyable and accessible manner.

Regulation

Our Modules

Legislation, Roles & Responsibilities

What are first aiders expected to do in the workplace and the health and safety regulations that underpin this.

Assessing an Incident

How to approach a scene safely, assess the situation and make prompt and effective decisions on treatment.

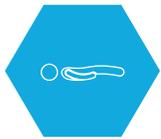

Assessing a Casualty

How to determine what is wrong with a casualty and how to prioritise treatment.

CPR and AED

How to save non-breathing casualties using Defibrillators and high quality CPR, utilising new training technology.

Recovery Position

How to assess and treat an unresponsive casualty.

Seizures

How seizures occur, how to treat and when the ambulance should be called.

Choking and Asthma

How to stop someone choking in a "hands on" way and learn best practice in treating Asthma.

Bleeding and Shock

How to treat minor wounds and major bleeding. How to treat for shock.

Burns

How different types and severity of burns are caused, how to treat these and when the casualty should go to hospital.

Bespoke

If you would like extra training on a particular topic that you want your first aiders to have more knowledge in then we can add these topics into the session.
